The city is an “organism in the making”, an entity in constant transformation, not a complex of immutable elements. The city represents the entire human experiential field of the world, considered as expression of a “fundamental movement of existence” in its completeness and historicity, expressed by the formative structure of tissues and building types, by the urban hierarchies, by the relations with the territory, by the social relations, and by the values and criticalities.

The conference’s aim is to propose a dialectical comparison between scholars of Architecture, Urban Planning, Urban History, Restoration, Geography, on the theme of urban morphology with an interpretative perspective based on the concept of “operating history”. Search for a multidisciplinary syncretism that eludes single analyzing techniques and aims to the complete reconstruction of the urban phenomenology in its totality and concrete essence, through the study of the changing and inflexible condition of “fluidity” hinged on the world’s events. An integrated operating history with an interpretative perspective based on the concept of “ex novo” design in peripheral and peri-urban areas.

Therefore, the projection in the future of the urban form is the central theme of the conference that is the research perspective of “being” that announces the notion of transformational process.
